

CANNABIS FERTILIZING SERIES

Fertilization series
designed for optimal
cultivation of cannabis
under greenhouse
conditions, based on
desalinated water or RO

PRODUCT #1

CNB 0-5-5+TE- CNB VEG

A rich fertilizer adapted for the vegetative growth phase, suitable for detached substrate/ hydroponics systems/ soil grow.

For optimal results, it is necessary to add **Kinneret Magseed** - additional calcium and magnesium - for the different stages of growth.

Vegetative growth phase - prior to flowering:

CNB VEG - 1.12 cc of fertilizer per 1 liter of water.

Kinneret Magseed | 7.4-0-0+5.5Ca+2.5Mg - 1.2 cc of fertilizer per 1 liter of water.

PRODUCT #2

CNB 0-4.8-7.2+3 REP

A rich fertilizer adapted for the reproductive growth phase, suitable for detached substrate/ hydroponics systems/ soil grow.

For optimal results, it is necessary to add **Kinneret Magseed**- additional calcium and magnesium - for the different stages of growth.

Reproductive phase - from flowering to harvest:

CNB REP - 4.4 cc fertilizer per 1 liter of water.

Kinneret Magseed | 7.4-0-0+5.5Ca+2.5Mg - 1.2 cc of fertilizer per 1 liter of water.

The CNB series products are divided into 3 compositions: CNB VEG, CNB REP, KINNERT MAGSID that are complementary products. A combined application, according to the recommendations of the different growing stages, provides the optimal nutrition for your plant.
